Vectors of Causal Organisms. Ticks.

Abs Jour: Ref. Zhur. - Fiol., No 23, 1958, 104116

mend that a fight be waged against ticks on animals only in herds which graze in the river valleys of rivers of the Central European type (that is, having only spring floods) or in elevated places near rivers of the mountain type. Large-scale activity of *D. pictus* imagos coincides with the blossoming of the hawthorn, but the first individuals appear before it begins to blossom. Three types of habitats of *D. pictus* were established on the investigated territory of Central Europe: a) areas occupied by pastures where the main hosts of the imago are domestic animals; b) uninhabited areas, where the main hosts of the ticks are primarily wild animals - deer, chamois and hares; c) areas of mixed type. Apparently, with the cultivation of wild nature by man *D. pictus*

✓ 2144 Maciejasz, Z. Research over the Degree of Self-Ignition Tendencies
in Coal when the Artificial Oxidation Method is Used.
"Badania stopnia przygotowania węgla do samozapalenia metodą

"sztucznego utleniania". Archiwum Górnictwa (PAN). No. 1, Warszawa,
1956, pp. 95-105, 11 figs.

Temperature changes occurring during artificial oxidation with H_2O_2 of coal displaying a tendency to self-ignition are very similar to the temperature effects occurring in the self-ignition processes of coal. In both cases, there is a very distinct preparatory phase and a phase of self-heating. These effects are not observed in the oxidation of coal with no tendency to self-ignition. Coal samples taken from various places in a seam have, when oxidized artificially, preparatory phases of differing duration, depending on the previous period of exposure of the coal to oxidation in air and the consequent degree of preparation for self-ignition; for example the preparatory phase during oxidation is shortest in the case of samples obtained from places where there was a fire or from places nearest to the fire. It follows that, with the method of artificial oxidation, both the tendency of coal to self-ignition and the degree of preparation for self-ignition can be determined.

Title : Study of the Effect of Increased Temperature on
Changes of H₂O₂ Concentration in the Coal - H₂O₂
Solution System.

Orig Pub: Arch. gorn., 1956, 1, No 4, 379-387

Abstract: This study covered the decomposition kinetics of
H₂O₂ water solutions (I) by coal (C) employed as a
fine powder with particle size less than 0.06 mm.
Kinetics of the temperature increase involved in
this system and ability of C to reduce an acidic
solution of KMnO₄ were investigated. Temperature

Maciejewics W. Eng Mechanization in Making Concrete Roads,
"Mechanizacja budowy nawierzchni betonowych" Przeglad Budowlany No 10-11, 1949, pp. 423-431, 20 figs., 6 tabs

The advantages of using machinery in road construction. High standard of work, saving of time and labour. Road-making machines (combines), description of their several elements - concrete mixers with supplementary equipment, concrete spreaders, profiling machines, compressing and finishing machines. Types of machines, the output and characteristic data of each. The mechanisation methods applied in state road making up to 1948. A practical conception of the use of mechanisation in making concrete roads

Maciejewicz W., Szacilo J. **Mechanisation of Earth Works.**
"Mechanizacja robot ziemnych" Inżynieria i Budownictwo No. 1,
1931, pp. 11-20, 12 figs., 4 tabs.

The authors deal, from the point of view of practical use, with
the problem of mechanising earth work. The authors, after certain
introductory notes dealing with the classification of soils according
to the degree of difficulty in decohering them and with the use of

machines for the transport of earth, go on to discuss the mechanisation of earth work in three main fields: 1) mechanised cutting of earthworks, 2) mechanised transport of earthworks material by rail, 3) mechanised cutting of earthworks material by road. After describing the site cutting and filling machines, machines for consolidating the fills and for transporting mineral fills, machines for compacting the fills and for filling reservoirs, the individual types of machines, describe them. Finally, they review the individual types of machines, describe them and refer to the technical and operating features and to the use of the machines. Computations of the output capacity of certain machines are also provided.

Effect of 2,4-D on the chlorophyll content of higher plants.
W. Maciejewska-Potapczykowa. *Bull. soc. sci. agric.* *Lett. Classe 111*, 4, No. 12, p. 3 pp. (1951). A reduction in the chlorophyll content of *Ranunculus* plants was found with the application of 0.037% 2,4-D. The reductions were visible 3-4 days after application by use of the method of Hirsch (G.A. 33, 8411). Plant growth under artificial light had a lesser reduction. This change was accompanied by the increase of phytol in the plant.

Orig Pub : Acta Soc. bot. Polon., 1957, 26, № 3, 585-596

Abstract : The upper parts of 1-2 tubers together with the eyes and the stony discs 5 mm thick cut from the carrot root in the area containing lateral roots, and also segments of red cabbage stalk were washed for several hours in running water in order to remove the wound hormones. They were then subjected to the action of kinetin (10^{-6}) and IAA (10^{-7}), adenine ($30 \cdot 10^{-6}$) and distilled water (control). Kinetin increased the number of cell divisions in the meristematic tissues and in the callus. Under the effect of kinetin a layer of cambium appeared in the callus tissue and proceeded

ABSTRACT : The effect of kinetin on water and nitrogen content in certain plants

DATE 1958 : Acta Soc. Bot. Polon., 1958, 27, No. 1, 1-11.

ABSTRACT : Kinetin, adenine, indoleacetic acid and a mixture of these substances produced an increase in both water and total N content in the tissues of pea epicotyl and the thallus of the liverwort Riccia fluitans. Kinetin and to a lesser extent adenine acted chiefly on the synthesis of N compounds, while indoleacetic acid affected water accumulation. The bibliography contains 44 titles.
